

SmartCast Link™ Hardware

Extend the Power and Value of Your SmartCast® Network Far Beyond Lighting

Gain Even Greater Profitability, Productivity and Control

The SmartCast Link™ device is the secure and powerful microcomputer at the heart of the SmartCast Intelligence Platform™. Together with the software it hosts (purchased separately), SmartCast Link™ hardware allows your SmartCast® lighting networks to communicate with and be controlled by other applications through the SmartCast® API.

SmartCast Advisor™: Analytics for Peak Performance

SmartCast Advisor™ software (purchased separately) distills massive amounts of information from your lighting network into clear, actionable insights so you can repurpose wasted space and achieve even deeper energy savings.

Share Your SmartCast® Data with BACnet®

A SmartCast® lighting network with BACnet® capability gives you control over HVAC loads by sharing occupancy data from your lighting network with your building management system — so you can stop spending money to heat and cool unoccupied spaces.

Yes, You Can Have an App For That

Cree's Application Programming Interface (API) provides a highly secure, future-ready protocol allowing third-party developers to expand and extend the reach of your lighting network intelligence for seamless interoperability and virtually limitless potential with building automation systems and IoT applications.

PRODUCT SPECIFICATIONS

Processor/Cache

CPU: Intel® Pentium® Processor N3700 Quad Core

Device Memory

RAM: 4GB SO-DIMM

Disk Space: 120GB Minimum

Input/Output Ports

LAN: 4x RJ45 Gigabit Ethernet LAN ports

USB: 2x USB 3.0 ports

Display: 1x Display Port, 1x HDMI, 1x VGA (Two Independent Displays)

Other: TPM 1.2 Header

Limited Warranty†: 3 years
